ELECTRICAL PROGRAM

A partnership between

**British Columbia Institute
of Technology**

And

Career Education Department

Are you interested in becoming a Construction Electrician?

JOB DESCRIPTION

Electricians work in a wide variety of buildings and facilities - on everything from lighting and climate control systems, to communication equipment and thousands of other specific tools and devices. An Electrician's work involves assembling, installing, commissioning, testing, maintaining, servicing and operating electrical systems and equipment. There are three main settings in which electricians typically work. They are as follows:

Construction – electricians work either as employees who are part of a contractor's team, on both residential and commercial construction projects, or as independent electrical contractors on such projects.

Industrial – electricians are typically employed on staff at large-scale industrial facilities such as pulp mills, hydroelectric dams, and mining and smelting operations.

Institutional – most large institutions such as hospitals, school boards, universities and other public facilities have at least one electrician working as part of their maintenance department. Electricians also need a good understanding of the many applications of electricity, and must ensure that building codes and other safety requirements are followed.

CONNECT TO POST SECONDARY

Through the Electrical Program you have the potential to earn both high school and post-secondary credits.

COURSE CREDITS

- TRNA 12A
- TRNA 12B
- TRNA 12C
- TRNA 12D
- TRNA 12E
