

QR (Quick Response) Codes

Many people are already using QR Codes to link parents directly to their school website. We are trying to get our new Kindergarten parents to save our website as one of their favourites and enter their email addresses when they come to register next Monday.

If you do not have a QR Code linking your website, you can create one:

1. On your computer Google QR code creator. I used Go QR at <http://goqr.me/en/>
2. Select the URL tab.
3. Type in your school web address.
4. It will generate a QR code.
5. We created a sign.
6. Any parent with a smart phone or iPad can use any number of apps such as QR Reader, Red Laser, etc. to scan the code and save it. See sample below:
